Title: Robot-assisted gallbladder-preserving hepatectomy for treating hepatoblastoma in children: a case report and literature review

Dear Editor,

We would like to thank World Journal of Clinical Cases for giving us the opportunity to revise our manuscript.

We thank the reviewers for their careful read and thoughtful comments on previous draft. We have carefully taken their comments into consideration in preparing our revision, which has resulted in a paper that is clearer, more compelling, and broader. The following summarizes how we responded to reviewer comments.

Below is our response to their comments:

To Reviewer 1:

1 In the abstract, the background should be re-write. It seems copied from the introduction section.

We have rewritten the background.

2 Some minor language polishing in the main text should be corrected.

We regret there were problems with the English. The paper has been carefully revised by a native English speaker to improve the grammar and readability

3 In the case presentation section, "Chief complaints, History of present illness, History of past illness, Physical examination, Laboratory examinations, Imaging examination, Further diagnostic work-up, Microbiological identification of the causative agent" should be deleted.

We have deleted the "Chief complaints, History of present illness, History of past illness, Physical examination, Laboratory examinations, Imaging examination, Further diagnostic work-up, Microbiological identification of the causative agent" from our manuscript.

4 What's the meaning of "MULTIDISCIPLINARY EXPERT CONSULTATION"?

Only a department was listed. It's meaningless. Please delete it.

We have deleted the "MULTIDISCIPLINARY EXPERT CONSULTATION".

5 The figures should be moved to the end of the text.

The figures format is modified according to the requirements of the editorial department.

6 Discussion is good.

Thank you.

To Reviewer 2:

Very interesting case about robot-assisted gallbladder-preserving hepatectomy for treating S5 hepatoblastoma in children. The literature was well reviewed. Only the main text and the abstract should be improved by an English speaker. Some minor language errors should be corrected.

The paper has been revised by the author, and polished by a native English speaker to improve the grammar and readability

Thank for all the help.

Best wishes.
