human sexuality. Many gaps between these endogenous hormones and sexuality need further studies, especially in human being. Endorphins and endogenous oxytocin are intrinsic hormone. The potential impact of them on sexuality and romantic relationships is no well understood. This manuscript pointed out a common and interesting topic. After careful reviewing, reviewer feel two things maybe helpful for improving. 1.Though the author almost systemically reviewed the related studies the subject and analyzed the gaps between endogenous hormones and sexuality, suggestions on how to link this gaps still remains unclear. Reviewer suggests point out suggestions on the future studies. 2.Reviewer believe the author reviewed more than the references for this manuscript, but 94 references? Is it too many?
