COMMENTS TO AUTHORS

The subject of this manuscript which is intended to be published as editorial(Epigenetics targets of RA) is an important one and has been addressed in several reviews and editorials in the last few years. However the references in this abstract is up to 2008 only . This makes the contents of manuscript deficient in informations about the recent advances of this very important process involved in the pathogenesis , identifying biomarkers for early diagnosis and response to therapy in rheumatoid arthritis. The manuscript is well written with few typographic errors that need to be corrected.

COMMENTS TO AUTHORS

The editorial is devoted to a very important aspect of RA-pathogenesis. The test is well done
