COMMENTS TO AUTHORS

This is an review article for pathogenesis of peritoneal dissemination in gastric cancer. The authors summarized the possible pathogenesis and its associated markers. The content is excellent and will give readers a good information.

COMMENTS TO AUTHORS

The authors have reviewed good studies for "Molecular mechanisms of peritoneal dissemination in gastric cancer" and have submitted a well-written manuscript.

COMMENTS TO AUTHORS

Peritoneal dissemination in gastric cancer is associated with a poor prognosis and there is still no proven treatment. In this article, the authors review current knowledge regarding molecules responsible for each step of peritoneal dissemination formation. If active molecular studies about peritoneal dissemination continue, I think sensational treatment will be developed soon. However, the authors quoted too many references in this article, so it was difficult for me to focus on the subject. The authors also need to mention in detail about chemotherapy which have been conducted in clinical studies recently.
