COMMENTS TO AUTHORS

This review article deals with the role of MSKs in inflammatory arthritis in the context of various cell types involved in the pathogenesis. I have one major comment: the main body of the paper is consistent with title. However, the summary does not appear to represent the paper. In summary there are a lot of description on CREB which suggest CREB is mentioned in the text in detail. But in the text, MSK is the focus of attention and description on CREB is scarce. So I suggest authors change the summary in such a way that it represent the main focus of the text.

COMMENTS TO AUTHORS

This is a fairly well written article that focuses on MSKs in arthritis. My comments are: 1. The article contains very little information on MSKs in arthritis. The authors should include a section on MSKs in animal models of arthritis and in human arthritis (if known). 2. A schematic diagram showing the structure of MSKs and their activation would be very useful.
