COMMENTS TO AUTHORS

This is a very good review covering the subject about "Biomarkers of psoriasis severity and therapy monitoring". Addition of the following minor issues could further strengthen the present review: 1) Please add also the DLQI index as a psoriasis severity marker. 2) Are there any associations between sTNF-R1 and TNF- α levels reported in the literature regarding psoriasis patients? 3) Authors should include a paragraph regarding biomarkers in psoriatic arthritis.

COMMENTS TO AUTHORS

The paper presents a comprehensive and well-written review on biomarkers of psoriasis. Although the topic is complex, the presentation is clear and comprehensive

COMMENTS TO AUTHORS

Complete and clear review on a topic of current interest; only minor linguistic revision should be performed before publication.

COMMENTS TO AUTHORS

In general it is a well written manuscript about biomarkers in the psoriasis that incorporates current information. My only comment is that the manuscript would be enriched if authors include CCR6 market and the target therapy.

COMMENTS TO AUTHORS

This is an interesting and detailed review of the biomarkers of psoriasis severity and therapy monitoring. The use of certain biomarkers to monitor psoriasis severity may not be very specific, and this should be mentioned in the manuscript. For example, CRP may be elevated in many different types of inflammatory and infectious diseases, and this should be considered when using CRP to monitor psoriasis severity.
