#### **SPECIFIC COMMENTS TO AUTHORS**

Dear Authors, Thank you for your valuable manuscript which I had the pleasure to read. The case studies are interesting and the described management can be of value for colleagues facing similar cases. Nevertheless, I think a more detailed description of the patient's epidemiology would be interesting. Were they from the same region? both were exactly 3-year-old? It would also be worthy to mention their vaccination status. Unfortunately, the tables were not sent to me in the review document. I have added some specific queries on the manuscript for your kind comment. Overall I think a review of the manuscript's language would be beneficial. Finally, I thank you for your efforts and wish you good luck with your submission.
