Appropriate Prescribing in the Elderly - Current Perspectives

Amanda Hanora Lavan, John O'Grady, Paul Francis Gallagher

Abstract

Advances in medical therapeutics have undoubtedly contributed to health gains and increases in life expectancy over the last century. However, there is growing evidence to suggest that therapeutic decisions in older patients are frequently suboptimal or potentially inappropriate and often result in negative outcomes such as adverse drug events, hospitalization and increased healthcare resource utilization. Several factors influence the appropriateness of medication selection in older
