SPECIFIC COMMENTS TO AUTHORS

For the last sentence in "Introduction", [Another article describes bilateral intermediate uveitis with hot discs on angiography and 6/6 visual acuity associated with dabrafenib and trametinib therapy (10).], please explain what is "hot" disc. Please mention Figure 2C is left or right eye. The authors pointed out that this case can actually be a flare up of herpetic uveitis when the patient is immunocompromised with the BRAF/MEK inhibitors despite on prophylactic dose of oral acyclovir.
