

## **Animal care and use statement**

August 15, 2017

Name of Journal: World Journal of Gastroenterology

ESPS Manuscript NO: 35213

Manuscript Type: ORIGINAL ARTICLE

Title: Resveratrol modifies biliary secretion of cholephilic compounds in sham-operated and cholestatic rats

Authors: Eva Dolezelova, Alena Prasnicka, Jolana Cermanova, Alejandro Carazo, Lucie Hyrsova, Milos Hroch, Jaroslav Mokry, Michaela Adamcova, Alena Mrkvicova, Petr Pavek, Stanislav Micuda

Correspondence to: Stanislav Micuda, MD, PhD, Professor, Department of Pharmacology, Charles University, Faculty of Medicine in Hradec Kralove, Simkova 870, 500 38, Czech Republic, [micuda@lfhk.cuni.cz](mailto:micuda@lfhk.cuni.cz); Telephone: +420-495 816 233

The animal protocol was designed to minimize pain and discomfort to the animals. The animals were acclimatized to laboratory conditions (22°C, 12h/12h light/dark, 50% humidity, *ad libitum* access to food and water) for two week prior to experimentation. Intragastric gavage administration was carried out with conscious animals, using straight gavage needles appropriate for the animal size.

Yours faithfully,

Prof. Stanislav Micuda, MD, PhD
