### COMMENTS TO AUTHORS

The manuscript is interesting and I recommend some adjustments. What is increasing worldwide, the incidence or the diagnosis of gastric subepithelial tumors? technique and not technique confined and not confined. SMT-What does it mean?-submucosal tumor resection and not resection laparoscopic and not laparoscopic. This procedure limits the amount of deformity and stenosis.- Rewrite the sentence because it is confusing. In Figure 1, the board C is not good. I recommend exclusion "Theoretically, it is possible that a gastric SET such as GIST is accidentally ruptured during resection with peritoneal seeding". This sentence needs to be rewritten, because English is not good. Contraindicated and not contradicted.
