SPECIFIC COMMENTS TO AUTHORS

In this study, a total of 74 elderly patients with myocardial infarction were randomly selected, and all patients were randomly divided into the research group and the control group. The blood pressure variability of these two groups in the first week, the fourth week and the 12th week were compared, Baroflex sensitivity, changes in cardiopulmonary function measures, and adverse cardiovascular events. The findings are interesting, and well discussed. Comments: 1. The manuscript have to be edited according to the journal's guideline. 2. Images should be improved. Too small. 3. Please update the references.
