## COMMENTS TO AUTHORS

an excellent review article, very worthy of publication indeed. An aspect of care for patients with IBD often ignored by both specialists and GPs, owing to lack of defined remit of care by the two types of healthcare providers has led to neglect of significant aspect of preventive healthcare to patients with IBD. Whilst guidelines by various societies have done a lot to remit this work to specialists who have often successfully delegated to Specialist nurses and other support staff and perhaps the best way to deliver such care is between the specialist nurses and the GPs having a constant dialogue involving the patient in the middle on all aspects of care; both control of disease activity and anticipation and taking care of preventive needs. Authors have done good in producing this comprehensive manuscript which will help the specialists and their support staff. Well-done and congratulations to authors

## COMMENTS TO AUTHORS

It's a very interesting manuscript about preventive Health Measures in Inflammatory Bowel Disease. Concerning dysplasia and colorectal cancer risk, author might reported preventive surgery for high dysplasia because colorectal cancer rates is higher in this type colorectal specimen. This article give guidelines.

## COMMENTS TO AUTHORS

The manuscript is intended to serve as a guide regarding preventive health measures in inflammatory bowel disease, to prevent morbidity and mortality aiming on the location where each intervention may be best delivered. Editor should be aware that the authors search strategy includes only MEDLINE for published articles, - the authors did not cross check with EMBASE and Science Citation Index. Thus, there is a risk of missing studies and publication bias in this review. I also believe it is important to point out that non-compliance to IBD-treatment regimes (e.g. 5-Aminosalicylic Acid, corticosteroids and immunosuppressants) have shown to increase the risk of recurrences, thus a screening tool for non-compliance may also serve as an important preventive health intervention.
