COMMENTS TO AUTHORS

This is a comprehensive and detailed review study and shows the difficulties to manage the disease for lack of studies addressing this issue. Studies on small bowel cancer depend on size of the sample and can only be performed in multicenter studies due to the low prevalence of the condition. As this theme is not studied very frequently and because this is an objective review study, it deserves to be published.

COMMENTS TO AUTHORS

The author shows the review of small bowel carcinoma in genetic risks and familial associations. Small bowel carcinoma is less frequent tumor and the genetic risk is unclear. The paper is interesting in the point of view. However, there are concerns with regards to the investigation. Please see below.

1) The description of small bowel carcinoma is much shorter than that of large bowel carcinoma. The small bowel carcinoma should be reviewed in exact detail. 2) The abstract has a lack of useful information. The abstract should be added informative contents.
