Multiresistant bacterial infections in liver cirrhosis: Clinical impact and new empirical antibiotic treatment policies

Juan Acevedo

Abstract

Recently, important changes have been reported regarding ⁶the epidemiology of bacterial infections in liver cirrhosis. There is ¹⁵an emergence of multiresistant bacteria in many European countries and also worldwide, including the USA and Korea. The classic empirical antibiotic treatment (third-generation cephalosporins, e.g. ceftriaxone, cefotaxime or amoxicillin-clavulanic acid) is still effective in
