COMMENTS TO AUTHORS

It is said in the section about indication of CE that a metanalysis (reference 47) has shown superior diagnostic yield than DBE in OGIB, with a pooled odds ratio being 1.48. However, the confidence interval ranges from 0.90 to 2.43. Intersecting the interval the line of no-effect, this difference is not statistically significant. So, there`s no superior diagnostic yield of CE than DBE.

COMMENTS TO AUTHORS

Good and informative review on the role of capsule endoscopy as well as revisiting its role and current status. Although would appreciate if author could elaborate more on the future status and advancement in CE and less of the current status since it's no new information.
