Observational Study

Relation of binge eating disorder with impulsiveness in obese individuals

Cenk Ural, Hasan Belli, Mahir Akbudak, Ali Solmaz, Zuhul Dogan Bektas, Fatih Celebi

Abstract

AIM: The objective of this study was to investigate the levels of impulsiveness, and the relationship between the Binge Eating Disorder (BED) and the levels of impulsiveness in obese individuals.

METHODS: 241 obese patients who were included in the study and candidate for bariatric surgery (weight loss surgery) were clinically interviewed to identify the BED group, and patients were divided into two groups: those with BED and those without BED.

The comorbidity rate of groups was determined by using structured clinical interviews for
