

Dear Editors and Reviewers:

We would like to express our sincere gratitude to the editors for the precious opportunity to revise the manuscript and to the reviewers for their valuable and constructive feedback. We have made our best effort to address the issues raised, and the changes made are summarized below and highlighted in red in the revised manuscript. (Due to the system being unable to submit the original manuscript, we have submitted the revised manuscript to the Supplementary Material.)

Reviewer #1:

1. Interesting topic for a case report. Limitations of study are well acknowledged.

Thank you for your interest in our work. And thank you for taking the valuable time to review the manuscript. Hope you have a wonderful day.

Reviewer #2:

1. Introduction page 3 line 39-44 and Discussion page 10 line 166-171. These two sentences are almost same and repeated. I think either one should be removed and organized the text.

Thanks for your advice. We have removed duplicate sentences in the Discussion. Please refer to page 12.

2. Explanation about anterior procedure. It is not so easy to image the surgical procedure of the explanation in the treatment section. I recommend a couple of figures and pictures of the surgical field will be attached.

Thanks for your suggestion. We have re-described the surgical steps in detail and added a figure of the surgical field. Please refer to page 7 and Figure 2.

3. Also, which is right or left lateral position? (I guess right lateral position.)

We deeply apologize for the confusion caused to you. The lateral position is right lateral position, and we have corrected it in the paper.
