## COMMENTS TO AUTHORS

The manuscript by Yun D and Stein SL "Review of the cutaneous manifestations of autoimmune connective tissue diseases in pediatric patients" covers a topic area with increasing interest in the field of pediatric dermatologic diseases. The authors exhaustively summarize all the diagnostic criteria and treatments currently used for different autoimmune connective tissue diseases characterised by cutaneous manifestations, emphasizing the unique aspects of disease onset in pediatric age. The review is scientifically accurate, complete and fully comprehensive to the reader. The reference section is adequate, up-to-date and appropriate to back up the points made in the article. The study conveys a clear-cut message. I have no major comments on this paper. However, there are some points that need to be addressed: 1) Perhaps another table summarizing all the described diseases with diagnostic criteria and treatment could improve the readability and the comprehension of the review. 2) Since authors cited the "dominantly inherited familial form of chilblain lupus erythematosus ...due to a mutation in TREX1" relative to lupus erythematosus, they could also mention the recently described Monogenic Form of Systemic Juvenile Idiopathic Arthritis.
