COMMENTS TO AUTHORS

In the present study, the authors investigated the protein expression of Ang-1, Ang-2, Tie-2 and VEGF in colon of rats with UC and CRC by using western blotting. And also the difference of Ang-1, Ang-2, Tie-2 and VEGF in UC and CRC was evaluated to elucidate the potential role of these factors in the progression from inflammation to malignant transformation. The study is well design, and results are interesting. 1 The manuscript need some editing. 2 The discussion should be re-write. 3 References list should be checked and updated.
