SPECIFIC COMMENTS TO AUTHORS

Review comments WJCC- 91757_reviewer, major revision. It is my great honour and pleasure to review such an interesting manuscript. The authors report laparoscopic radical resection of rectal cancer and adequate lymph node removal in a patient with crossed renal ectopia with no postoperative discomfort. This article is a clinical case report. The authors should strongly explain the scientific reasons for the correlations between crossed renal ectopia with rectal cancer. In this condition, there is academically nothing, at all. Line 12, page4, Please delete or replace the inadequate expression “that is to say, we began to walk on a too deep plane,” There has been a similar reported as below. 3D-laparoscopic anterior rectal resection in a patient with crossed fused renal ectopia: the importance of 3D imaging. Minerva Chir 2017 Dec;72(6):546-547. doi: 10.23736/S0026-4733.17.07363-1. Of course, this topic is interesting and important. However, the present manuscript needs some revisions for the publication of “World Journal of Clinical Cases”.
