Joint arthroplasty Perioperative Surgical Home: Impact of patient characteristics on postoperative outcomes

Duy L Phan, Kyle Ahn, Joseph B Rinehart, Michael-David Calderon, Wei-Der Wu, Ran Schwarzkopf

**Abstract**

**AIM:** To determine the impact of different characteristics on postoperative outcomes for patients in a joint arthroplasty Perioperative Surgical Home program.

**METHODS:** A retrospective review was performed for patients enrolled in a joint arthroplasty Perioperative Surgical Home (PSH) program who had undergone primary total hip arthroplasty (THA) and total knee arthroplasty (TKA). Patients were preoperatively stratified based on specific procedure performed, age, gender, body mass index (BMI), American Society of Anesthesiologists Physical Classification System (ASA) score, and Charleston Comorbidity Index (CCI) score. The primary outcome criterion was hospital length of stay (LOS). Secondary criteria including operative room (OR) duration, transfusion rate, Post-Anesthesia Care Unit (PACU) stay, readmission,
