## Primary Hyperparathyroidism with Extensive Brown Tumors ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4722419>

There have been reports of brown tumors associated with **primary hyperparathyroidism**, but most of them present a focal brown tumor usually localized to the jaw and maxilla [4,5]. Here, we **report a case** of extensive brown tumors and **multiple** fractures caused by a parathyroid adenoma in a 20-year-old woman.

## Osteosarcoma of Bone in a Patient With Primary ...

<https://onlinelibrary.wiley.com/doi/full/10.1359/jbmr.2003.18.1.163>

Dec 02, 2009 - A 69-year-old woman was diagnosed with a malignant tumor of the right proximal femur. She had **primary hyperparathyroidism** and chronic elevation of parathyroid hormone levels (PTH > 1000 pg/ml). She underwent resection of the bone lesion; histological analysis showed a high-grade fibroblastic osteosarcoma.
