

19th of Jul 2023

Dear Reviewers:

I am delighted to receive your advice, thank you for reviewing our manuscript. You suggested it would be good to mention about the follow-up of the patient - the management of liver contusion, any complication like - bile leak, hemoperitoneum management, timing of cholecystectomy in this case. We have already supplemented the information you mentioned to OUTCOME AND FOLLOW-UP. Another question you mentioned that we could not pick up this complication during the procedure because of these 3 trials of cannulation of left hepatic duct discussion. We agree with you. We ruled out other reasons and gave a possible reason.

Sincerely yours,

Shang-wen Yang
