

## ESPS PEER REVIEW REPORT

**Name of journal:** World Journal of Clinical Cases

**ESPS manuscript NO:** 12791

**Title:** Voltage gated calcium channel (VGCC) antibody-related neurological diseases

**Reviewer code:** 00070411

**Science editor:** Fang-Fang Ji

**Date sent for review:** 2014-07-27 22:49

**Date reviewed:** 2014-11-19 10:19

| <input type="checkbox"/> Grade E: Poor            |   | <input type="checkbox"/> No records | <input checked="" type="checkbox"/> Major revision     |

## COMMENTS TO AUTHORS

This is an interesting review. The authors reviewed pathogenesis, clinical features, laboratory findings and treatment options of two Voltage gated calcium channel (VGCC) antibodies-related diseases (Lambert-Eaton myasthenic syndrome (LEMS) and paraneoplastic cerebellar degeneration). However, this manuscript is poorly written, and there are several major issues that need attention. 1. In this review, the author just listed the data that has been reported, lacking analysis and critical discussion. The review must be a concise in depth review of the topic and the review must be focused. 2. In the "Lambert-Eaton myasthenic syndrome" section, most of the presented data is handbook knowledge-the authors do not provide anything new or innovative to the literature. 3. The "Cerebellar degeneration associated with voltage gated calcium channel antibody" section is also not well-written. No subsections are provided. The association between voltage gated calcium channel antibody and cerebellar degeneration is not sufficiently explained. 4. The authors should check the entire manuscript for linguistic errors.
