## Small intestine bleeding due to multifocal angiosarcoma

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3508646>

Nov 28, 2012 · We **report** a **case** of an 84-year-old male patient with primary small **intestinal angiosarcoma**. The patient initially presented with **anemia and melena**. Consecutive endoscopy revealed no signs of upper or lower active **gastrointestinal bleeding**. The patient had been diagnosed 3 years previously with an aortic dilation, which was treated with a stent.
