COMMENTS TO AUTHORS

This is an interesting case report regarding the benefit on psoriasis vulgaris in a patient affected by advanced colon cancer and treated with a sequential combination with Cetuximab and panitumumab. I would suggest two minor changes: 1) in the "case report" section, at pag. 5, at line 6 please change "partial remission" in "partial response". According to RECIST criteria for solid tumour the word "remission" is no correct. "Remission" is a correct word utilized for haematological malignancies; 2) in my opinion the sentence "We hope that this case report serves to further clarify the pathogenesis of psoriasis vulgaris and eventually develop a curative therapy for this disease" reported in the discussion section is too hard and I would suggest to delete "and eventually develop a curative therapy for this disease".

COMMENTS TO AUTHORS

It's an interesting report of receiving anti-EGFR antibody monotherapy therapy was benefit to psoriasis vulgaris of a patient with advanced colon cancer. Here are major concerns: 1 Since concomitant psoriasis vulgaris is very rare among patients with advanced colon cancer, how about the incidence of this disease in colon cancer patients worldwide or in authors' department? 2 The authors showed us a rare case of a patient with psoriasis vulgaris whose symptoms lessened during treatment with anti-EGFR antibody monotherapy for metastatic colon cancer. It would be more perfect if an evidence-based medical research of larger samples, multi-center and unified standards was carried out.
