## COMMENTS TO AUTHORS

This is an interesting narrative review focusing on liver damage by voriconazole. **MAJOR POINT** The English style and grammar need extensive revision by a native speaker because they compromise the pleasure of reading this nice contribution. **OTHER POINTS** The author may want to consider these aspects: a) is damage by voriconazole mainly due to cytotoxic damage to the hepatocyte or to cholestasis or mixed? b) what is the role of autoimmunity in causing damage when no clearcut dose-dependence is found (as in this case)?

## COMMENTS TO AUTHORS

The effect of voriconazole on the liver is a useful topic to review, but the poor fluency of the article makes it difficult to follow. It appears that good articles were chosen and the organization is fine. Unfortunately, the sentence structures are awkward and make the text difficult to follow.

## COMMENTS TO AUTHORS

Please review and improve the written English as it is difficult to follow Please state more clearly what your aims are for this article There is too much concentration on pharmacology and not enough on the association with the liver
