Intraepithelial lymphocytes, scores, mimickers, and challenges in diagnosing gluten-sensitive enteropathy (Celiac disease)

Consolato Sergi, Fan Shen, Gerd Bouma

Abstract

The upper digestive tract is routinely scoped for several causes of malabsorption and the number of duodenal biopsy specimens has increased notably in the last 10 years. Gluten-sensitive enteropathy (GSE) is an autoimmune disease, which shows an increase in prevalence worldwide and requires a joint clinico-pathological approach. The classical histopathology of GSE with partial or total villous blunting is well recognized, but the classification of GSE is not straightforward. Moreover, several mimickers of GSE
