### **SPECIFIC COMMENTS TO AUTHORS**

Authors describe in the paper an experiment in order to determine the added diagnostic value of virtual chromoendoscopy in the context of accurate detection of gastric antral vascular ectasia (GAVE). The article is within the scope of the journal. It is well written and structured. It is easy to read and it is clear on the objectives and methods used to obtain the results. In this sense, the experiment is well designed and executed. The results obtained represent an advance in the area of knowledge. However, it could be improved as follows: a) There is no conclusions section and future work. It should be included. b) The discussion section is reduced and the article would improve if the results obtained are valued by comparing them with other similar works. c) The state of the art is very poor. It should be expanded with more bibliography.

### **SPECIFIC COMMENTS TO AUTHORS**

It is an interesting and less described topic indeed which is taken up by authors, but I would like to bring some points for consideration prior to acceptance. 1. Abstract: In the Results  $p > 0.05$  mentioned as significant while  $p < 0.05$  mentioned as not significant. Similar description is given at places in the Results section of the main manuscript. 2. Keywords are not according to journal guidelines. 3. In the Methods it would have been appropriate to mention inclusion and exclusion criteria of the following study. 4. Connective tissue disease and patients on dialysis were included in the study. Authors did not mention in detail regarding exclusion criteria. As rheumatoid arthritis, CKD etc. are causes of GAVE and should have been excluded from the study. 5. In this study there is no correlation done between disease severity i.e. Child status or MELD with PHG and GAVE. As with Child C, PHG and GAVE will be more obvious while with Child B they may have inconspicuous changes. So, correlation of this with I scan would be more optimal. 6. Reference writing is also not according to journal guidelines. 7. Lastly, authors mentioned it as a prospective Cohort study. But in the study there is no mention of follow up of cohorts per se. It looks like more of a cross-sectional study done at a point of time, all cases were evaluated for GAVE and PHG. However, no follow up mentioned. Though in table 1 repeat labs were done at 4-8 weeks, but that does not confer any relation to follow up. 8. Sample size is obviously very small to draw any inference.

## RE-REVIEW REPORT OF REVISED MANUSCRIPT
