statements	Conflicts-of-Interest: [ ] Yes [Y] No

## SPECIFIC COMMENTS TO AUTHORS

I won't talk about the advantages. 1.In figure 3, MRI imagings should add T1WI and T2WI. 2.It is suggested to add the pathological image of puncture biopsy. 3.Some references are a bit old and may be replaced with newer ones if possible.

## SPECIFIC COMMENTS TO AUTHORS

The paper "Starry liver": Von Meyenburg complex clinical case presentation and differential diagnosis discussion" discusses the importance of accurate diagnostic of this rare congenital disorder. This case very good emphasizes that the knowledge of differential diagnostic features of the condition is essential to establish the correct diagnosis. The paper is well written, clear and easy to understand. I recommend this paper should be accepted with minor revision. Page 14: Figure 3 Gadolinium contrast-enhanced magnetic resonance cholangiography. Multiple lesions were hypointense on T1-weighted imaging and hyperintense on T2. No communication between hamartomas and biliary ducts; noticeable typical formation of a "starry sky." - which particular MRI sequence is shown in the picture?
