

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 88453

Title: Effect of cardiac rehabilitation care after coronary intervention on cardiac function recovery and negative mood in patients with myocardial infarction

Provenance and peer review: Unsolicited Manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 06140425

Position: Peer Reviewer

Academic degree: PhD

Professional title: Assistant Professor

Reviewer's Country/Territory: Netherlands

Author's Country/Territory: China

Manuscript submission date: 2023-11-03

Reviewer chosen by: AI Technique

SPECIFIC COMMENTS TO AUTHORS

Usually, surgical treatment is only the first step in the treatment of myocardial infarction, and subsequent cardiac rehabilitation care cannot be ignored. Cardiac rehabilitation care plays a critical role in promoting cardiac function recovery, improving the QoL, and alleviating negative emotions. This paper aims to investigate the effects of cardiac rehabilitation care after percutaneous coronary intervention on cardiac function recovery and negative mood in patients with myocardial infarction. This study is well designed and the methods are in detail. The results are interesting, and well discussed. Comments:

1. The manuscript requires a language editing. Some language polishing should be revised.
2. The limit of the study should be discussed.
3. Please edit and update the reference list. Some references seem in Chinese, please double check it. Usually, English references with PMID should be referenced.
