COMMENTS TO AUTHORS

Detailed comments for transmission to the authors, The manuscript by Dr. Anne Karoline Schreiber and collaborators presents new data on the diabetic neuropathic pain. This review describes recent achievements in studying the pathogenesis of diabetic neuropathic pain and potential treatments. Although a number of studies on this subject have been published, still much remain to be clarified. Thus, the present work appears timely. The authors present very well the mechanisms that lead to diabetic neuropathic pain and pharmacological treatments. The authors expressed their points clear and developed them, they also had a critical, constructive analysis of the literature in this specific field and a well-organized writing. My opinion is that, this paper is very good regarding the drug options for patients with diabetes. The manuscript is state-of-the-art and the presented results are of potential interest for a wide readership, therefore I recommend publication in ‘World Journal of Diabetes’.

COMMENTS TO AUTHORS

Title: Diabetic neuropathic pain: physiopathology and treatment Diabetes is a worldwide epidemic, and associated neuropathy is its most costly and disabling complication. Given the rising prevalence of painful diabetic neuropathy, it is increasingly important that we understand the best ways to diagnose and treat this condition. This review summarized the various factors that may contribute to the pathogenesis of diabetic neuropathic pain as well as the possibilities of pain treatment. This is a well-organized review that represent the current advances in the field. The manuscript is precise and clear. The overall quality and impact of this manuscript is good.
