COMMENTS TO AUTHORS

The review article by Sheng et al. is quite well researched and warrants publication. However, there are many changes that need attention. 1) Changes that have been tracked in the article by the reviewer need to be accepted. 2) The title should be changed so that it sounds more exciting. 3) The full name for CoASH and My2+ needs to be given in the first paragraph. Also, the full name for CGI needs to be given in the second last paragraph. 4) The section entitled "ACSLs and Tumours" has been removed as it was repeated completely from a previous section in the review.
