Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 6410-review.doc).

Title: Recurrent headaches may be caused by cerebral toxoplasmosis

Authors: Joseph Prandota, Anna Gryglas, Aleksander Fuglewicz, Agata Żesławska-Faleńczyk, Barbara Ujma-Czapska, Leszek Szenborn, Janusz Mierzwa

Name of Journal: *World Journal of Clinical Pediatrics*

ESPS Manuscript NO: 6410

The manuscript has been improved according to the suggestions of reviewers:

1 Format has been updated

2 Revision has been made according to the suggestions of the reviewer

(1) Corrected: **AIM:** To establish seroprevalence and provide characteristics of TG infection in children with recurrent headaches.

(2) Added: Core tip:

The work estimated the seroprevalence and characteristics of *T. gondii* infection in 178 children admitted consecutively to Pediatric Neurology Dpt because of recurrent headaches. 19 children had significantly increased serum anti-*T. gondii* IgG antibodies levels and high avidity index which indicated chronic infection. It is suggested to treat these patients specifically for 5-10 days and eventually be aware of the Jarisch-Herxheimer reaction.

(3) Added: COMMENTS: Children with recurrent headaches should have tests for *T. gondii* infection obligatorily performed, and eventually specifically treated for 5 or more days because at present available kits for measuring anti-*T. gondii* IgG and IgM antibodies are not fully specific and/or sensitive.

(4) Revision: The second reference No 39 has been removed and the numbers of the References and the respective numbers in the text and the Table 5 have been changed accordingly (the changed numbers are in red colour).

Thank you again for publishing our manuscript in the *World Journal of Clinical Pediatrics*.

Sincerely yours,

Joseph Prandota, MD, PhD
