Addictive behaviors in liver transplant recipients: The real problem?

Hélène Donnadieu-Rigole, Pascal Perney, José Ursic-Bedoya, Stéphanie Faure,
 Georges-Philippe Pageaux

Abstract

Liver transplantation (LT) is the gold standard treatment for end-stage liver disease. Whatever the primary indication of LT, substance abuse after surgery may decrease survival rates and quality of life. Prevalence of severe alcohol relapse is between 11 and 26%, and reduces life expectancy regardless of the primary indication of LT.
