Dear Editor,

Please find enclosed the revised version of our manuscript " **Spotlights on immunological effects of reactive nitrogen species: when inflammation says NO**" (Number ID: 00360024).

To address the reviewer's comments, we added two tables.

In the first table, we summarized the relationship between nitric oxide and immune system with the illustration of some key features supporting this statement and the data supporting them.

In the second one, we recapitulated the impact of NO on pathogenesis of diseases, highlighting the common mechanisms that could explain the onset and the progression of pathologies.

More, we included also a figure depicting the effects of NO produced by immune cells or from other sources onto different biological targets.

We modified the manuscript with the following minor modifications according the requests found in the downloadable pdf file:

1. We changed bibliography format in numbered way;
2. We modified the correspondence information, adding the missing fields;
3. We clearly indicated the conflict-of-interest statement (in the already submitted version, we added the disclosure in the acknowledgment);
4. We also correct three misspells found in the original version.

We hope that all these modifications will fulfil the revisions needed for the acceptance of our manuscript.

Looking forward Your kind reply,

Please do not hesitate and feel free to contact us if you need other pieces of information.

Sincerely Yours

Barbara Molon
