SPECIFIC COMMENTS TO AUTHORS

Thank you for opportunity for reviewing this excellent manuscript. Overall, author did this manuscript well. However, there are some point to be comment. 1. In my opinion, the title does not correspond to the content of manuscript. 2. In section "Renal Dysfunction", it would be more impressive if author mention about data of post LT outcome of hepato-renal syndrome. 3. In section "Hepatocellular carcinoma", author provide the information of strategies for preventing HCC recurrence but did not mentioned about the suitable strategies in HCC surveillance adequately. It would be more impressive if author mention this aspect more intensively.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting and detailed manuscript on the factors related to poor outcomes after liver transplantation. Authors did a good job in explaining the causative relationships between these factors and OLT outcomes across various populations and contexts. My main concern relates to the lack of information on methodology. The authors did not explain how was the information selected and evaluated before being included in this narrative review. How did they ensure that the information was complete? What databases were used and how was the information selected?
