<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7989191>

GI manifestations are reported in 11.4–61.1% of individuals with COVID-19, with variable onset and severity. The majority of COVID-19-associated GI symptoms are mild and self-limiting and include anorexia, diarrhoea, nausea, vomiting and abdominal pain/discomfort. A minority of patients present with an acute abdomen with aetiologies such as ...
