

PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 57787

Title: Massive gastric bleeding - perforation of pancreatic pseudocyst into the stomach:
A case report and review of literature

Reviewer's code: 05355672

Position: Peer Reviewer

Academic degree: MBBS

Professional title: Academic Fellow

Reviewer's Country/Territory: United States

Author's Country/Territory: China

Manuscript submission date: 2020-06-27

Reviewer chosen by: AI Technique

Reviewer accepted review: 2020-06-27 16:03

Reviewer performed review: 2020-06-27 17:04

Review time: 1 Hour

SPECIFIC COMMENTS TO AUTHORS

I read with interest the case report presented by Jin et al. The case report is interesting however, the language can be improved. I would suggest the authors get their manuscript checked by someone with expertise in English language or a native speaker. I have made some comments regarding this under minor criticism. The list is not exhaustive. Major: - Provide references to the case reports in the table and cite them in the table. - Please discuss the role of endoscopic therapeutic modalities for massive GI bleed as seen in your case report. Is there a role of hemospray, OTSC, conventional clip, Epi, APC etc? - Suggest adding a table or figure for potential therapeutic options (endoscopic, endovascular, surgical etc) with advantages and disadvantages of each modality. - For each therapeutic modality, please list the name of the manufacturer and company location/country. (for e.g. Gelfoam (Upjohn Co., Kalamazoo, MI)) Minor: In the abstract: - Case summary: "CT scan confirmed a pancreatic pseudocyst invaded part ..." should be "CT scan confirmed a pancreatic pseudocyst invading part..." - Case summary: "the gastric wall of greater curvature, arteriography showed that ..." These should be two sentences. Remove the comma and put a period and start the sentence "Arteriography showed that.... - Conclusion could be improved. Suggest changing to "Massive gastrointestinal bleeding could be a rare complication of pancreatic pseudo aneurysm." Core Tip: Last line... "... and TAE is a beneficial treatment option." Suggest changing this to " , with TAE as a potential therapeutic modality for achieving hemostasis." Introduction: Page 4 line 1: " , with reported death rates is about 50% ", suggest changing to " , with a reported death rate of approximately 50%". Last line. See the comment above for core tip. Case presentation: Physical exam: "Middle pale conjunctiva?". Please correct this... Physical exam: Please add if a digital rectal examination was performed. Imaging exam: "Drug hemostatis treatment?" Please

provide details... Figure 1: Please provide an arrow to area of interest in Figure 1A similar to Figure 1B Figure 2: Recommend adding arrows to highlight the area of interest. Will be well received by the readers. Final diagnosis: Can be improved... Suggest changing to "Upper gastrointestinal bleeding from a pseudo aneurysm of the arteria lienalis secondary to perforated pancreatic pseudoaneurysm invading into the stomach." Discussion: Line 2: "with the mortality rate is about 50%", suggest switching to "with a mortality rate of about 50%". Line 12 "The splenic artery is the most frequently involved site of pancreatitis complicated with pseudoaneurysm". Please provide factual data to support this. Line 14: "pancreas duodenal artery?" maybe "pancreaticoduodenal artery" "We conducted a review of published case reports describing patients with pancreatic pseudoaneurysms that communicated with the bowel lumen in the past 5 years (Table), when the cyst invades the gastrointestinal tract, bleeding can appear in the abdomen, stomach, duodenum and even the lower digestive tract, presenting as massive bloody stool and hematemesis or chronic intermittent bleeding after abdominal pain". Split this one sentence into shorter sentences. "Computed-tomography angiography(CTA) can improve the diagnostic positive rate during the bleeding period, it can demonstrate the full extent of a pseudoaneurysm, in case of partial thrombosis, and its effect on the adjacent viscera, but CTA has the disadvantage of radiation exposure, which is particularly critical in young patients". Suggest splitting this into small sentences.
