Current medical ⁴⁸ treatment of estrogen receptor-positive breast cancer

Franco Lumachi, Davide A Santeufemia, Stefano MM Basso

¹⁶
Abstract

Approximately 80% of breast cancers (BC) are estrogen receptor (ER)-positive and thus endocrine therapy (ET) should be considered complementary to surgery in the majority of patients. The advantages of oophorectomy, adrenalectomy and hypophysectomy in women with advanced BC have been demonstrated many years ago, and currently ET consist of (i) ⁴⁷ovarian function suppression (OFS), usually obtained using gonadotropin-releasing hormone agonists (GnRHa), (ii) ⁴⁶selective estrogen receptor modulators or down-regulators (SERMs or SERDs), (iii) ⁵³aromatase inhibitors (AIs), or a combination of two or
