< Introduction Methods Results Discussion Summary Aa >

Almost all effective treatments for major depressive episodes (MDE) are complicated by low rates of treatment-emergent mania including **hypomania** (TEM) in the acute treatment of recurrent major depressive disorder (MDD) (Montgomery et al., 2000) and higher rates in bipolar depression (BD) (Calabrese et al., 1999). Whereas significant numbers of studies have demonstrated the acute efficacy and safety of repetitive transcranial magnetic stimulation (rTMS) in recurrent MDD (Avery et al., 2006, F...
