Phenotypic and genotypic characterization of inflammatory bowel disease in children under six years of age in China

You-Hong Fang, You-You Luo, Jin-Dan Yu, Jin-Gan Lou, Jie Chen

Abstract

AIM: To analyze clinical differences between monogenic and non-monogenic very-early-onset inflammatory bowel disease (VEO-IBD) and to characterize monogenic IBD phenotypically and genotypically via genetic testing.

2017年3月2日 - IBD is frequently presented in adults, but about 20% of IBD cases are diagnosed during childhood called pediatric IBD (PIBD). Some patients in the latter group emerge the first symptoms during infancy or under 5 years of age named infantile and very early onset IBD (VEO-IBD), respectively.
