Observational Study

Causative factors of discomfort in esophagogastroduodenoscopy: A large-scale cross-sectional study

Majima K *et al.* Factors in esophagogastroduodenoscopy discomfort

Kenichiro Majima, Takeshi Shimamoto, Yosuke Muraki

Abstract

BACKGROUND

It is important to reduce patient discomfort in esophagogastroduodenoscopy. Remedial measures can be taken to alleviate discomfort if the causative factors are determined; however, all the factors have not been elucidated yet.

AIM

Causative factors of discomfort in esophagogastroduoden

Jul 30, 2019 · Age was also a **factor** in another study; the older children stated more body areas with higher **pain**, and used more evaluative and temporal words to describe their **pain** . The association of **pain** with body mass index was positive in this study, this could be explained, at least partially, by the notion that more **pain** leads to less movement and thus more **weight gain**.
