

Reviewer 1:

This is a case report regarding a very rare liver tumor in a child. A well-written case report of rare disease. No specific comments.

A: Thanks for your positive comments.

Reviewer 2:

Interesting Case report, well written and concised. I only have a couple of techincal remarks - 1. The structure of the case details shouldn't be broken to small headlines, but shuold rather be written as a story in one piece. 2. The authors need to get rid of the patient details in the MRI figure enclosed, and I think further images, prehaps in the coronal view should be added. 3. I'm not sure all the histology figures should be included, some of them don't really add to the report Other than that, I thank the authors for an enjoyable read.

A: We have revised the manuscript with all the necessary changes.
