<input type="checkbox"/> Grade E (Poor)		<input type="checkbox"/> No records	<input type="checkbox"/> Major revision

COMMENTS TO AUTHORS

After reading the text, I found minor language mistakes, as well as several inconsistencies in the References section. Also, the tables should be properly referenced in the manuscript. The only major concern with the manuscript would be the use of commercial products and the pharmaceutical companies names within the text (acceptable practice, ethical issue ???). API (exenatide) would be more appropriate.

COMMENTS TO AUTHORS

It is an excellent paper, which fills a long-felt gap. All the conclusions are evidence-based, closely reasoned and clear. I highly recommend its publication.

COMMENTS TO AUTHORS

Reviewer Comments: The manuscript by Scott Tenner entitled "Drug Induced Acute Pancreatitis: Does It Exist?" reviews the present problem about drug induced acute pancreatitis. Though each content is well estimated, following comments are offered. Major Comments 1. This review explains not if drug induced acute pancreatitis exists or not, but over diagnosis for drug induced acute pancreatitis does exist. The author had better reconsider the title of this paper. 2. It is written that "Simply, despite case reports and MedWatch reports, exenatide DOES NOT cause acute pancreatitis." (Page.9). Please mention whether author has the same opinion or not. Or even this FDA conclusion, is it thought that there is still some risk of developing pancreatitis from exenatide? Minor Comments. 1. The author needs to correct the letters of the classification on "Table 2". The letters should be the same as Table 1, that is, Class Ia drugs, Class Ib drugs and Class II drugs
