2016 Hepatitis B virus: Global view

Innate immune targets of hepatitis B virus infection

Li Wang, Zhi-Qiang Zou, Kai Wang, Xiang-Zhong Liu

**Abstract**

Approximately 400 million people are chronically infected with hepatitis B virus (HBV) globally despite the widespread immunization of HBV vaccine and the development of antiviral therapies. The immunopathogenesis of HBV infection is initiated and driven by complexed interactions between the host

**Match Overview**
