JOURNAL EDITOR-IN-CHIEF (ASSOCIATE EDITOR) COMMENTS TO AUTHORS

Dr. Honda and colleagues have presented an interesting observational study in which the aimed to identify factors that influence long-term liver function following radiofrequency ablation (RFA) in patients with viral hepatitis-related hepatocellular carcinoma. The authors have presented a revised version of their study and successfully implemented the criticisms and comments raised by the reviewers in the revised manuscript. I have no additional and specific comment to the presented article. The language meets the requirements for publication. For that I consider accepting the revised manuscript for publication in World Journal of Hepatology as it is.
