SPECIFIC COMMENTS TO AUTHORS

It is interesting to read this paper. The title and the keywords are well chosen. The three cases reported were good enough to illustrate the key findings. In physical examinations of the patients, the ENT exams were well described. However, it would be deficient that the authors did not mention the examination findings of the other cranial nerves in some cases. The facial nerve and the vestibular nerve examination were essential to be examined.

SPECIFIC COMMENTS TO AUTHORS

The authors presented case reports of 3 patients with SD as first sign diagnosed later as ACI. The case report is interesting, however there are some minor concerns noted as follows: 1. The language needs improvement. There are many grammar and spelling errors. Refer to the attached file for correction. 2. Timeline of this report is not organized in a table or figure form. Table 1 doesn't fit well in describing the timeline clearly. 3. For case 2 and 3: All figure sections are not cited in text. 4. For case 3: It seems that figures are wrongly cited at some places.

SPECIFIC COMMENTS TO AUTHORS

This is an interesting rare case report. This manuscript is nicely structured and well written. I have no question about this manuscript.
