### Prospective Study

Agreement and conversion formula between mini-mental state examination and montreal cognitive assessment in an outpatient sample

Luqman Helmi, David Meagher, Edmond O'Mahony, Donagh O'Neill, Owen Mulligan, Sutha Murthy, Geraldine McCarthy, Dimitrios Adamis

### Abstract

**AIM:** To explore the agreement between the MMSE and MoCA within community dwelling older patients attending an old age psychiatry service and to derive and test a conversion formula between the two scales.

**METHODS:** Prospective study of consecutive patients attending outpatient services. Both tests were administered by the same researcher on the same day in random order.

**RESULTS:** The total sample (N=135) was randomly divided into two groups. One to derive a conversion rule (n=70), and a second (n=65) in which this rule was tested. The agreement (Pearson's  $r$ ) of MMSE and MoCA was 0.86 ( $P < 0.001$ ), and Lin's Concordance Correlation Coefficient (CCC) was 0.57 (95% CI 0.45-0.66). In the second sample MoCA scores were converted to MMSE scores according to a
